From the President

Wow! The 2017 Massachusetts Orchid Society Show is over and I think it was a success! I hope everyone could at attend.

This show could not have not have happened without a heck of a lot of help from many members. I want to thank everyone who helped any way they could, be it working at the show, telling people about the show, showing your support by attending the show, or any other way. Here's a list of people to especially thank.

Vanda Hybrid, Brigitte Fortin Slc. Numazu Star 4N, Linda Abrams

I hope you're excited for our holiday party! The following list is a suggestion of what sort of dish to bring. If you have a special dish that you want to bring instead of the suggested, please do! For example, I am assigned to bring an appetizer, but if you know me, you'll know I'm a bigger fan of desserts than appetizers so I will likely bring my signature molasses ginger crinkles!

A - F Desserts

G – L Appetizers

M - Z Salads

Turkey, ham, and drinks will be provided. Thank you to those society members cookin' them up! -Brian

Andy's Orchids Winning Display

Catasetinae are rewarding orchids to grow and flower. The good news is, with so many hybrids available, there's an abundance of beautiful plants to choose from!

Thanks to Stephen Moffitt <u>bunsareus2@gmail.com</u> and Sue Bottom <u>info@staugorchidsociety.org</u> for sharing this article

Growth Cycle

Understanding the Catasetinae growth cycle is the key to successful culture. When the plants are in active growth, maintain a fairly constant root zone moisture and fertilize regularly to optimize new growth. When the plants are dormant little or no water is needed as the pseudobulbs store sufficient water and nutrients to survive their winter rest. Fred Clarke of Sunset Valley Orchids offers these recommendations.

Early Season. Catasetums begin their new growth cycle in winter to early spring. Once you see new growth, repot your plants into new medium. Last year's roots seem to deteriorate during dormancy and are not as effective as the new roots at taking water and nutrients. Whether or not you repot, do not water your plant until the new growth has well developed new roots. Your roots should be 3 to 5 inches long, so for the sake of simplicity, do not water until your new top growth is 3 to 5 inches tall. This cannot be emphasized enough. Do not water until the new growth has become well established.

Mid-Season. New roots are established and the plants are rapidly developing their new pseudobulbs. The growth spurt during this 3 to 4 month period is surprising, often the plants will double in size. To keep pace with their growth rate, the plants require constant moisture and regular fertilization. Normally you will water 2 or 3 times a week. A balanced fertilizer at full strength is suitable for this rapid growth or you can top dress with a controlled release fertilizer and apply water soluble fertilizers at a dilute rate, say 1/4 tsp/gal. Light levels at or above those suggested for Cattleyas will help insure strong good growth and flowering. The fruits of your labor will begin to pay off as the flowering season begins.

Late Season. In the late autumn the plants will begin to enter the dormancy phase, caused by the maturity of the pseudobulb, shorter day length, cooler day/night temperatures and a reduction of root zone moisture. The first signals you will observe on your plants are yellowing and browning off of the leaves. As a general rule, this will happen by mid-November, at which time you will stop fertilizing them and reduce watering by half. When all the leaves have dropped or by the end of

Winter Dormancy

New Growth

Summer Growth

The Bloom - Mo. Lime Tiger 'St. Augustine' AM/AOS

December, stop watering the plants. Watering during dormancy should only be done it the plant bulbs shrivel severely. Usually a single irrigation is sufficient to restore the bulbs.

Culture Articles. Here are some links:

- How to Grow the Catasetinae Fred Clarke, SVO
- Catasetinae Plant Culture Fred Clarke, AOS
- Growth Cycle Stephen Batchelor, AOS
- Culture Influenced by Growth Cycle Stephen Batchelor, AOS

Say folks, we're starting something new in 2018 and it features... YOU! Each month, members will tell us how they grow their orchids. If yours grow on windowsills, under lights year-round, outside in the summer, or, if you're one of the lucky ducks with a greenhouse, start taking photos of your growing spaces and send them, along with your success stories to **Anne Pfaff**, newsletter editor.

Some thoughts to get you started -

- Indoors, how do you maintain proper humidity, light & temp levels?
- What are the pros and cons of your lighting, ventilation and humidification systems?
- Watering without ruining your floors, messing up the bath or breaking your back carrying buckets.
- Greenhouse culture & setup; is yours a DIY or ready-made?
- How to induce flowering under lights; day lengths and temps.
- Growing on mounts, in orchidariums, micro-climates, hydroponically...

UPCOMING EVENTS

Monthly AOS Judging

02 Dec 2017 11:00 AM New Hampshire Orchid Society 3 Meeting House Rd, Bedford NH

Monthly Meeting & Holiday Party

Pleuro alleni, Ralph and Cheiko Collins

Thanks Nadine Lepick for contributing the following!

Have you ever wondered how your orchids came to be discovered? If so, then you'll want to know more about the Sander Orchids website.

Aside from Darwin's amazing discoveries of animals and plants, many other orchids were discovered by hired explorers. Several of whom endured extreme conditions during their exploits, like riotous indigenous peoples, animals, thieves and bodily injuries.

Many of these explorers were hired by Frederick Sander of St. Albans, England. Known as the "Orchid King", (his son was called the "Orchid Prince"), he began with plants supplied by Darwin and later hired men to search out other flora and fauna elsewhere around the world. Sander sold and auctioned off many of the flowers that were brought to him and actually began the period of "Orchidelerium" in Victorian England. A period similar to Tulip Mania in Holland many years before.

Once Sander was established in his business, he and Darwin later worked together germinating seeds of orchids that had been collected to continue growing the supply of new plants. Enough so that Mr. Sander's business would grow into two greenhouses in England and then expand to a third in Summit, New Jersey.

Sander did not only sell his plants. He made substantial donations of specimens over a number of years to increase the size of Kew Gardens in London and develop that institution.

This website contains a history of Sander's nurseries and files of all the correspondence between Mr. Sander and his paid explorers. Some of the letters cover general business, invoices and such. Others offer explanations of the adventures that many of the searchers experienced while searching for specimens in the wild. After a time, some of these explorers became very astute about their prey. They realized they could wait out the plants until they went to seed. In this way, they could cut their costs by shipping only the seeds back to England rather than the plants themselves.

Here is the link to the website: https://www.sandersorchids.com/sanders-orchids/the-orchid-hunters/

All of the historical materials stored here are now the property of Kew Gardens.

For further reading on this subject, there is another book available entitled:

Frederick Sander: The Orchid King written by Arthur Swinson.
